Where were the filters in the schools in which you installed them? Have they been moved from the locations they were installed? If so, how far from the initial locations are they now? I understand up to 350 children may be using each (or at least one) of the filters. Has the method of use been changed? Please, describe how. Please, do your best to describe how the community has changed the use of the materials given in order to best serve the needs of the community.
